**Green Fuels America President Greg Springer Speaks at the
US Dept. of Commerce 2011 National DEC Conference in Las Vegas**

November 4, 2011, Las Vegas, NV

Greg Springer, P.E., President of Green Fuels America is a speaker at the US Dept. of Commerce National District Export Council (DEC) Conference in Las Vegas, Nevada held November 2-5, 2011 at Caesars Palace. As part of the “U.S. Biofuels Technology Export Showcase” panel, Mr. Springer is speaking about the drivers and export successes of Green Fuels America’s modular, turn-key, “Community Scale” biodiesel process equipment into international markets.

“I am happy to explain how our factory built, modular, green, biodiesel process equipment is ideally suited for international export, says Mr. Springer. Our advantage in the international market place comes from our decentralized or “Community Scale” strategy where our equipment is scaled to be used near the source of the biodiesel feedstock, providing local energy independence with biodiesel that has 85% less green house emissions than petroleum diesel.”

The District Export Councils contribute leadership and international trade expertise to complement the U.S. Commercial Service’s export promotion efforts through counseling businesses on the exporting process and conducting trade education and community outreach. Closely affiliated with the U.S. Commercial Service’s U.S. Export Assistance Centers, the 56 District Export Councils (DECs) nationwide are organizations comprised of leaders from their local business community.

The DEC Members are appointed by the Secretary of Commerce. These international trade professionals use their knowledge and international business experience to act as consultants to small and medium sized businesses who want to export their products into markets outside of the United States. The energies of more than 1,800 exporters and export service providers throughout the United States, volunteer their time to promote numerous trade related activities. The NSC sponsors a nationally-focused “Export University” that brings the best practices for exporting and global business to business audiences around the US.

For more than 30 years, DEC's have served the United States by assisting companies in their local communities export, thus promoting our country's economic growth and creating new and higher-paying jobs for their communities.
